

Recommendation WG3.21.005

Replaces WG3.89.020

Inclusion of Case Resolution Information in PCNs

Subject Area: Coordination Procedures.

Recommendation: Occasionally, initiating coordinators include in their prior coordination notifications (PCNs) information which is sufficient to clearly resolve cases of potential interference. Such case resolution information may include OHLOSS (losses above free space) estimates, interference shielding estimates, frequency offset adjustments, or references to clearance agreements in previous coordination correspondence.

When such information is provided in a PCN, it should be appropriately used by recipients in their initial analysis of potential interference. Potential interference cases which can be cleared using such information should not be reported as “unresolved” in responses to the PCN.
